Russian Competitiveness: Where Do We Stand?

Professor Michael E. Porter Institute for Strategy and Competitiveness Harvard Business School

U.S.-Russian Investment Symposium
Boston, Massachusetts
13 November 2003

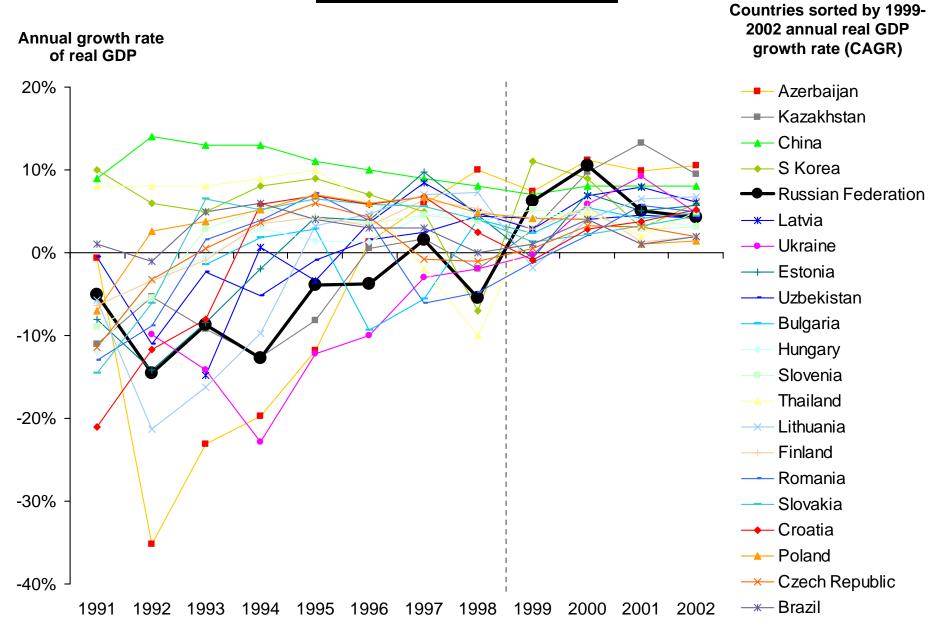

This presentation draws on ideas from Professor Porter's articles and books, in particular, <u>The Competitive Advantage of Nations</u> (The Free Press, 1990), "Building the Microeconomic Foundations of Competitiveness," in <u>The Global Competitiveness Report 2003</u>, (World Economic Forum, forthcoming 2003), "Clusters and the New Competitive Agenda for Companies and Governments" in <u>On Competition</u> (Harvard Business School Press, 1998), and ongoing research on clusters and competitiveness. No part of this publication may be reproduced, stored in a retrieval system, or transmitted in any form or by any means - electronic, mechanical, photocopying, recording, or otherwise - without the permission of Michael E. Porter.

Further information on Professor Porter's work and the Institute for Strategy and Competitiveness is available at www.isc.hbs.edu

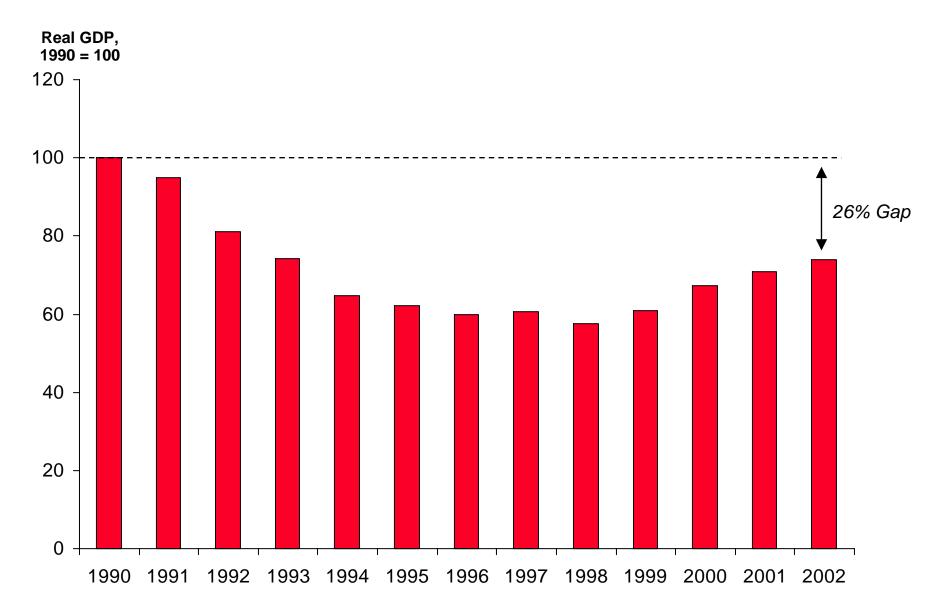

Russian Economic Performance 2003

- Russia's overall economic performance has improved since 1999 but is not exceptional relative to peer countries
- Recent progress has reflected clear improvements in macroeconomic policy and, to a lesser extent, the legal and corporate governance framework
 - However, much work still lies ahead
- Russia's prosperity and prosperity growth still rely heavily on inherited wealth, not created wealth
- The critical challenge for Russia is now microeconomic: mobilizing its potential strengths and address its considerable weaknesses to dramatically raise the productivity of Russia as a place to do business

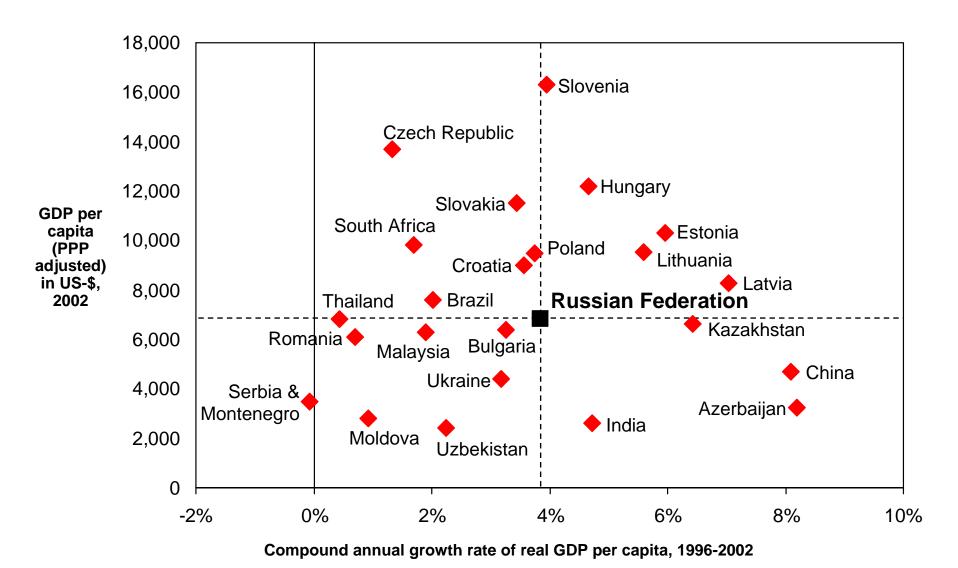

Comparative Economic Performance Real GDP Growth Rates

What is Competitiveness?

- Competitiveness is determined by the productivity with which a nation uses its human, capital, and natural resources. Productivity sets a nation's or region's standard of living (wages, returns to capital, returns to natural resource endowments)
 - Productivity depends both on the value of products and services (e.g. uniqueness, quality) as well as the efficiency with which they are produced.
 - It is not what industries a nation competes in that matters for prosperity, but how firms compete in those industries
 - Productivity in a nation is a reflection of what both domestic and foreign firms choose to do in that location. The location of ownership is secondary for national prosperity.
 - The productivity of "local" industries is of fundamental importance to competitiveness, not just that of traded industries
 - Devaluation does not make a country more competitive

- Nations compete in offering the most productive environment for business
- The public and private sectors play different but interrelated roles in creating a productive economy

Sources of Prosperity

Inherited Prosperity

- Prosperity is derived from selling inherited natural resources or real estate
- Prosperity is limited by the amount of natural resources available, and is ultimately temporary
- Focus gravitates towards the distribution of wealth as interest groups seek a bigger share of the pie

 Government is the central actor in the economy as the owner and distributor of wealth

Created Prosperity

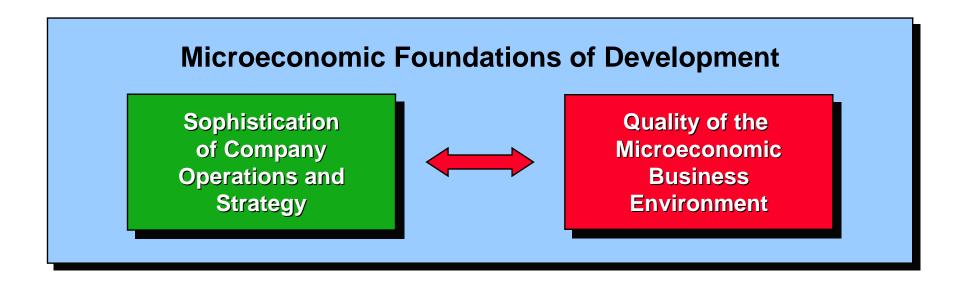

- Prosperity is derived from creating valuable products and services
- Prosperity is created by firms
- Prosperity is unlimited, based only by the innovativeness and productivity of companies in the economy
- Creating the conditions for productivity and innovation are the central policy question

- Companies are the central actors in the economy
- The **government**'s role is to create the enabling conditions

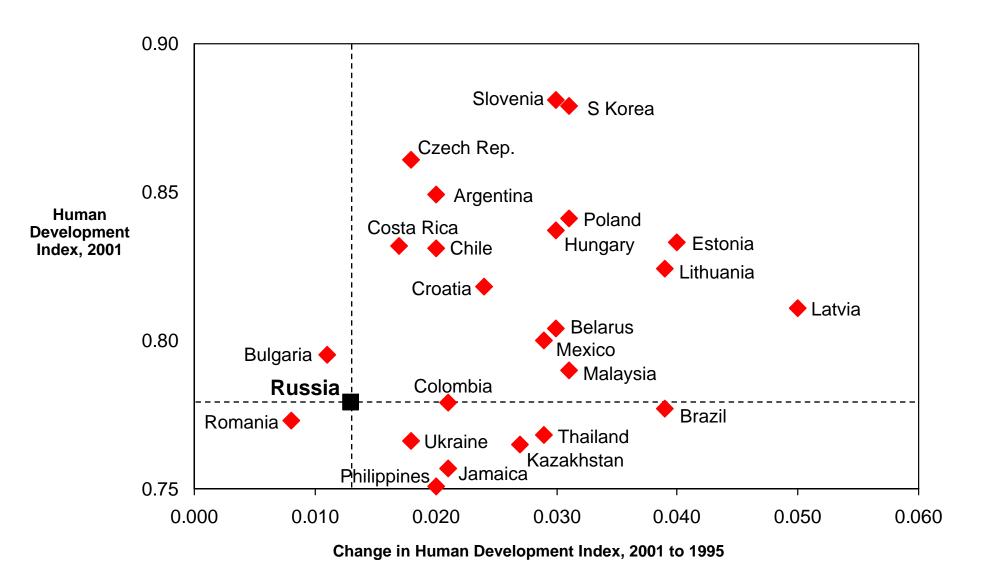

Determinants of Productivity and Productivity Growth

Macroeconomic, Political, Legal, and Social Context for Development

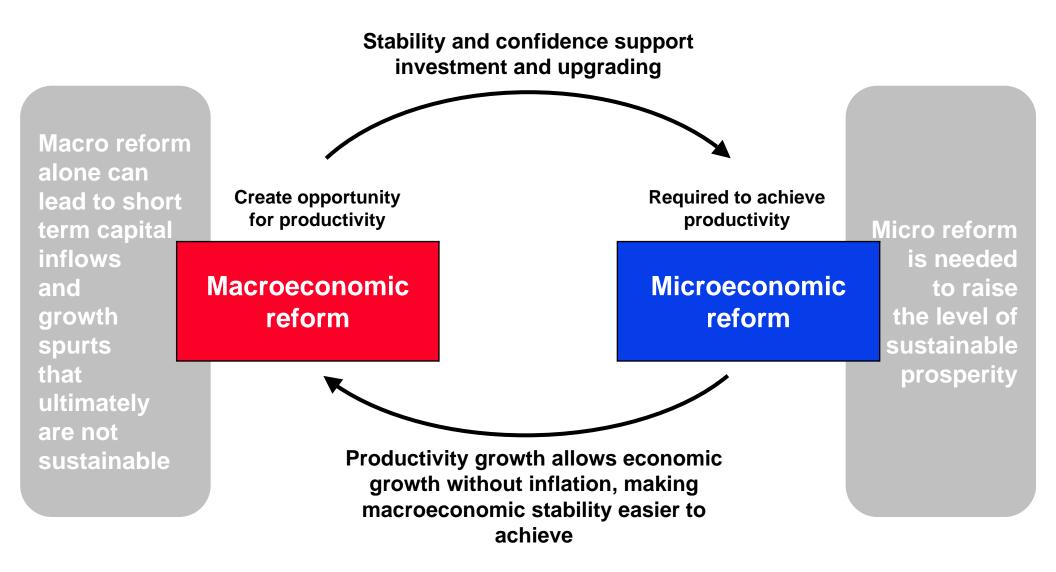

- A sound macroeconomic, political, legal, and social context creates the potential for competitiveness, but is not sufficient
- Competitiveness ultimately depends on improving the microeconomic capability of the economy and the sophistication of local companies and local competition

Productivity and the Business Environment

Successful economic development is a process of successive economic upgrading, in which
the business environment in a nation evolves to support and encourage increasingly
sophisticated ways of competing

Clusters and Competitiveness Houston Oil and Gas Products and Services Cluster

Leading Footwear Clusters

Portugal

- Production
- Focus on shortproduction runs in the medium price range

Romania

- Production subsidiaries of Italian companies
- Focus on lower to medium price range

- Design, marketing, and production of premium shoes
- world market

Export widely to the

United States

- Design and marketing
- Focus on specific market segments like sport and recreational shoes and boots
- Manufacturing only in selected lines such as handsewn casual shoes and boots

China

- OEM Production
- Focus on low cost segment mainly for the **US** market

Vietnam/Indonesia

- OEM Production
- Focus on the low cost segment mainly for the European market

Institutions for Collaboration <u>Selected Massachusetts Organizations, Life Sciences</u>

Life Sciences Industry Associations

- Massachusetts Biotechnology Council
- Massachusetts Medical Device Industry Council
- Massachusetts Hospital Association

General Industry Associations

- Associated Industries of Massachusetts
- Greater Boston Chamber of Commerce
- High Tech Council of Massachusetts

Economic Development Initiatives

- Massachusetts Technology Collaborative
- Mass Biomedical Initiatives
- Mass Development
- Massachusetts Alliance for Economic Development

University Initiatives

- Harvard Biomedical Community
- MIT Enterprise Forum
- Biotech Club at Harvard Medical School
- Technology Transfer offices

Informal networks

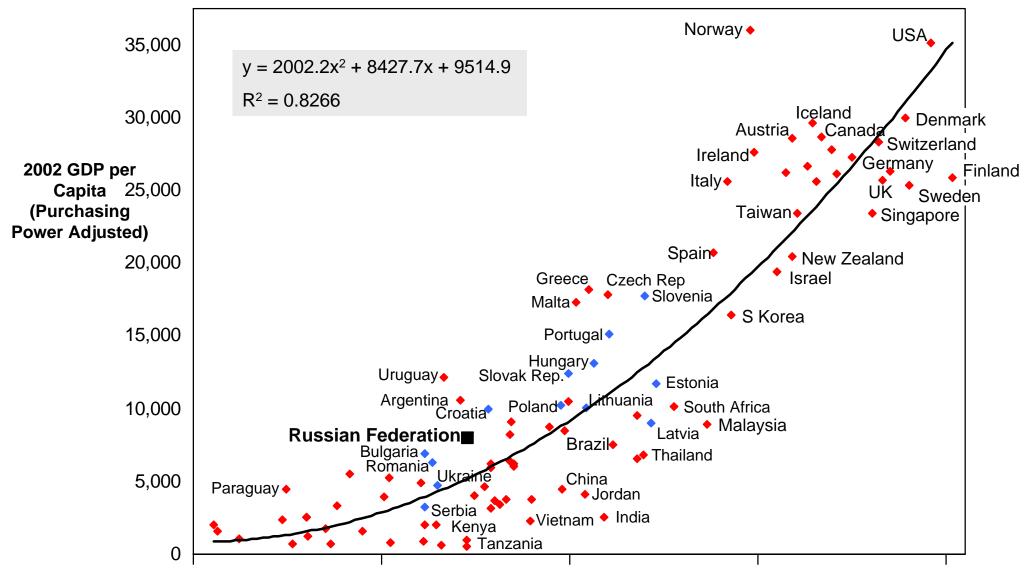

- Company alumni groups
- Venture capital community
- University alumni groups

Joint Research Initiatives

- New England Healthcare Institute
- Whitehead Institute For Biomedical Research
- Center for Integration of Medicine and Innovative Technology (CIMIT)

International Patenting Output Selected Transition Countries

Barriers to Structural Change in the Russian Economy

Competition

- Russia scores low in the Global Competitiveness Report on trade liberalization and non-tariff barriers
- Russia scores low on the level of domestic competition
- Competition is hampered and distorted by corruption and administrative inefficiencies

Entry and exit

- Russia has low formal barriers to entry, but business leaders report significant burdens for start-ups
- Russia has high formal barriers for firing employees and closing businesses, but business leaders report them as nonbinding in practice

Financial market

 Russian financial markets get low scores for providing sophisticated services and credit to companies

Russian Competitiveness Competitive Advantages and Disadvantages

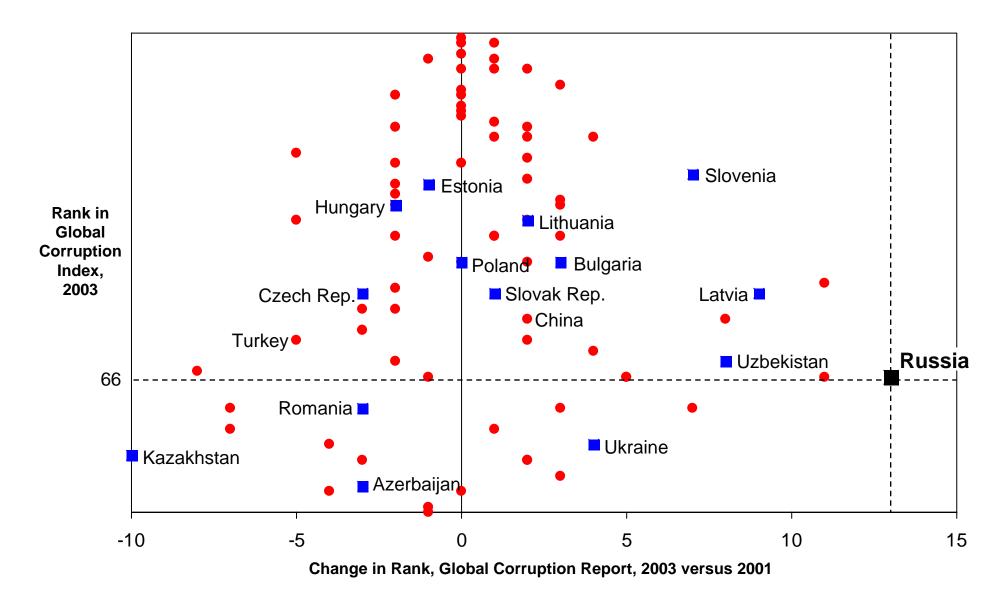

Competitive Advantages Relative to GDP per Capita

The Costa Rica Information Technology Cluster

Creating a Productive Economic Structure

Legacies of a Planned-Economy

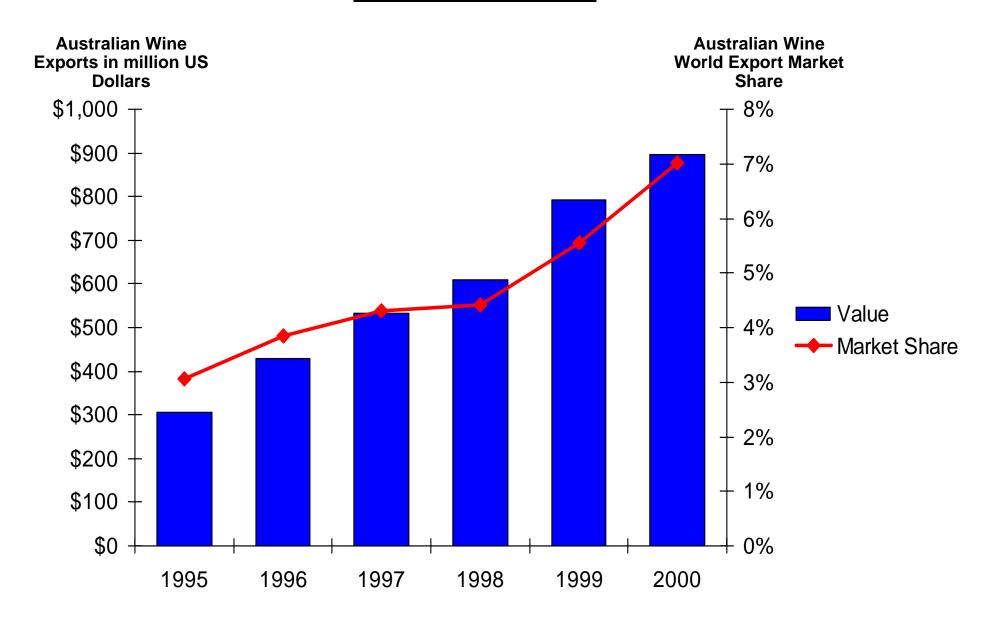

- Economic policy is centrally directed
- Buyer/supplier linkages seen from a national perspective
- Relationships between suppliers and buyers are specified and focused on production of defined goods and services
- The geographic locations of related economic activities driven by political and security considerations

Cluster-based Economy

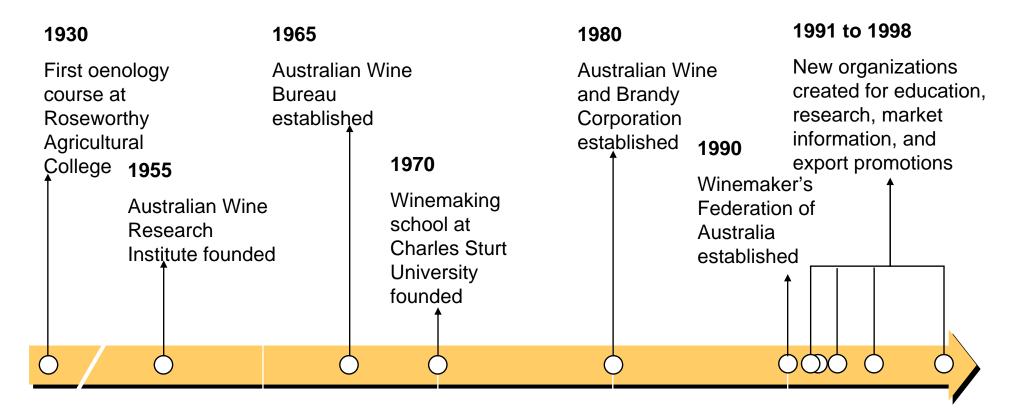

- Economic policy involves significant autonomy and institutions at the regional and local level
- There is specialization of regions across the fields in which they compete
- Externalities across firms and institutions in clusters facilitate productivity and dynamism
- Geographic choices are based on the economic attractiveness of locations; firms co-locate with others to reap cluster benefits

The Australian Wine Cluster Trade Performance

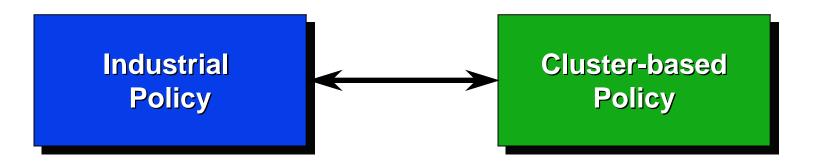

The Australian Wine Cluster History

1950s	1960s	1970s	1980s	1990s
Import of European winery technology	Recruiting of experienced foreign investors, e.a. Wolf Bass	Continued inflow of foreign capital and management	Creation of large number of new wineries	Surge in exports and international acquisitions

GCR Russia 2003 10-20-03.ppt 2003 © Professor Michael E. Porter

Cluster Policy versus Industrial Policy

- Target desirable industries / sectors
- Focus on domestic companies
- Intervene in competition (e.g., protection, industry promotion, subsidies)
- Centralizes decisions at the national level

- All clusters can contribute to prosperity
- Domestic and foreign companies both enhance productivity
- Relax impediments and constraints to productivity
- Emphasize cross-industry linkages / complementarities
- Encourage initiative at the state and local level

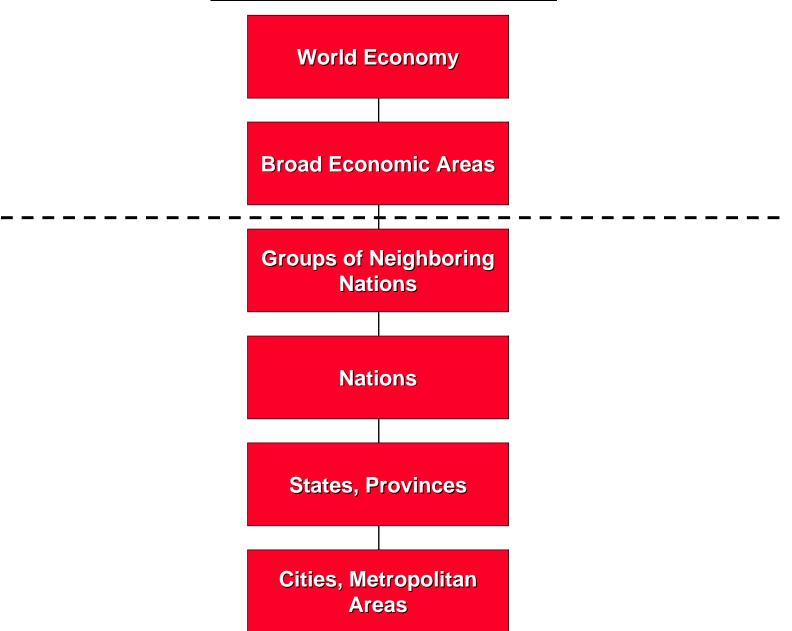

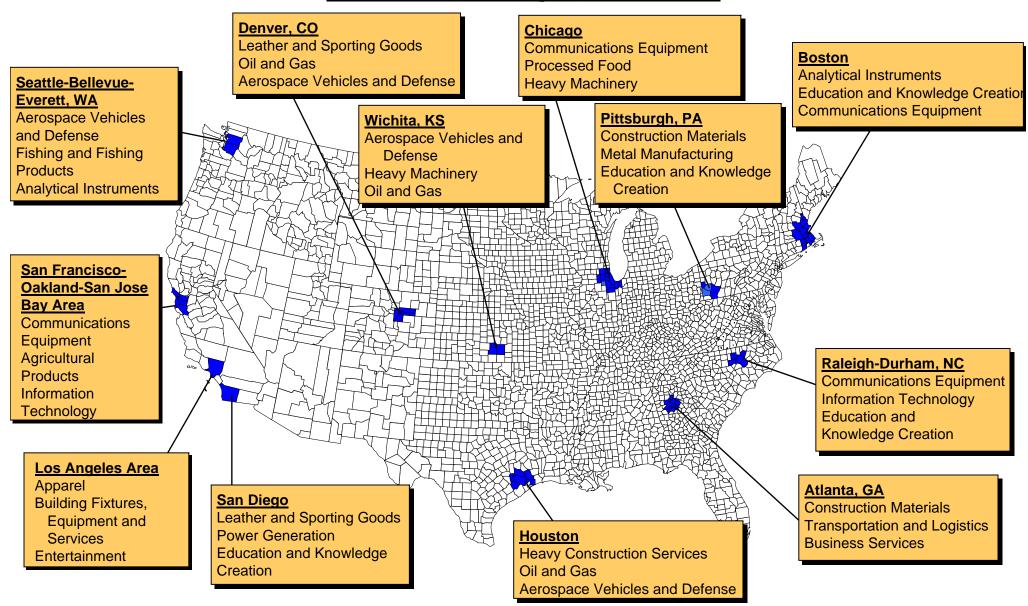

The Role of Clusters in Economic Development Overview

- Clusters are critical engines in the economic structure of national and regional economies
 - The health of their cluster determines the level of productivity companies can reach
 - Regional prosperity depends on significant positions in a number of competitive clusters
- Clusters can identify fundamental challenges in the national or regional business environment
 - Clusters are more aligned with the nature of competition and the microeconomic factors that influence competitive advantage
 - At the economy-wide level, only generic topics like taxes and trade protection are of joint interests to all companies
- Clusters provide a new way of thinking about an economy and organizing economic development efforts
 - Recast the role of the private sector, government, trade associations and educational or research institutions
 - Brings together firms of all sizes to identify common opportunities, not just common problems

Influences on Competitiveness <u>Multiple Geographic Levels</u>

Specialization of Regional Economies Select U.S. Geographic Areas

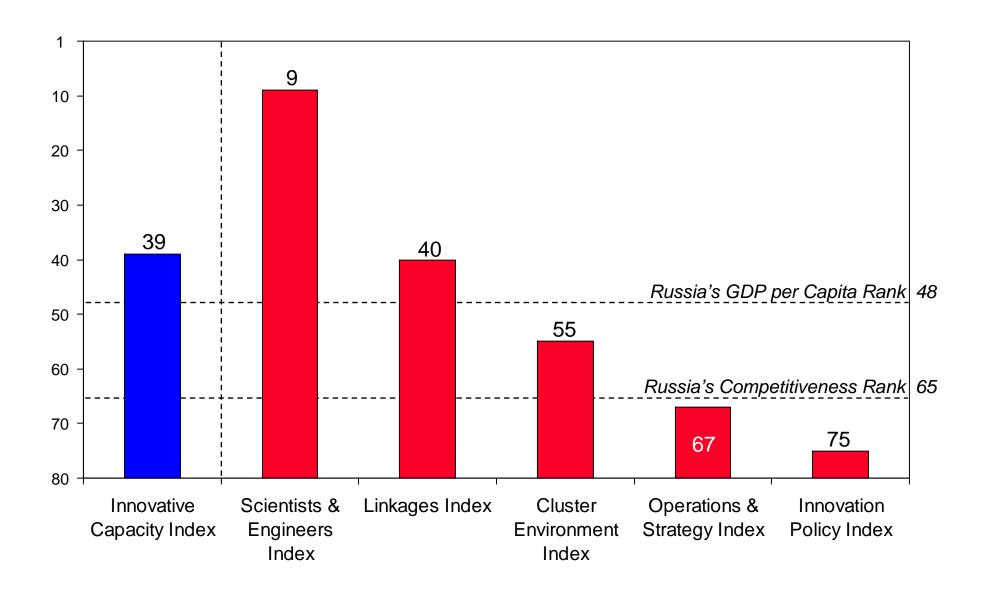

Note: Clusters listed are the three highest ranking clusters in terms of share of national employment Source: Cluster Mapping Project, Institute for Strategy and Competitiveness, Harvard Business School

Innovative Capacity Index Russia's Relative Position

Leveraging the Russian Technology Base **Illustrative Strategic Options**

- Russia faces challenges in attracting traditional manufacturing investments given the inefficiencies in its business environment relative to other locations
- Near term opportunities should focus where Russia is most unique

- Improve the innovation policy environment
 - Intellectual property right protection
- Create Technology Parks and R&D Free Zones
 - Simplified administrative rules
- Support cluster-development efforts around universities
 - Technology transfer offices
 - Recruiting foreign companies
 - Incubators

Shifting Responsibilities for Economic Development

Old Model

 Government drives economic development through policy decisions and incentives

New Model

 Economic development is a collaborative process involving government at multiple levels, companies, teaching and research institutions, and institutions for collaboration

Roles of Government in Economic Development

- Improve the macroeconomic, political, legal, and social context
 - Establish a stable and predictable macroeconomic, legal, and political environment
 - Improve the social conditions of citizens
- Upgrade the general business environment
 - Improve the availability, quality, and efficiency of cross-cutting or general purpose inputs, infrastructure, and institutions
 - Set overall rules and incentives governing competition that encourage productivity growth
- Facilitate cluster formation and upgrading
 - Identify existing and emerging clusters
 - Convene and participate in the identification of cluster constraints and action plans to address them
- Lead a collaborative process of economic change
 - Create institutions and processes for upgrading competitiveness that inform citizens and mobilize the private sector, government at all levels, educational and other institutions, and civil society to take action

Role of the Private Sector in Economic Development

- Take an active role in upgrading the local infrastructure
- Nurture local suppliers and attract new supplier investments
- Work closely with local educational and research institutions to upgrade quality and create specialized programs addressing cluster needs
- Provide government with information and substantive input on regulatory issues and constraints bearing on cluster development
- Focus corporate philanthropy on enhancing the local business environment

- An important role for trade associations
 - Greater influence
 - Cost sharing

Russia's Competitiveness Agenda

- Raise the productivity of the Russian business environment
- Adopt a cluster-based approach to economic development
- Push economic strategy to the regional level
- Shift the roles of government, business, and other institutions in economic development

• Creating the microeconomic foundations of sustainable prosperity in Russia
